I am attaching this as a word document, but you can also read it in the body of this email:

I opened the gate today 6/3/22 during the power outage so that no one would be locked in or locked out. I'm asking Barb and Reesa to make a plan for storms this summer, since Reesa will be at work all day and not available.

To prepare for a power outage at Alapine YOU SHOULD HAVE flashlights, batteries, rechargeable cell phone back up batteries that you recharge regularly.

Consider a plug-in, rechargeable flashlight that lights up when the power goes off.

Consider having an old fashion, landline phone that is NOT a cordless that runs only if the base has electricity.

Consider having a battery powered fan as it can get very hot and it is especially hard to sleep if the electric is off.

This is what YOU SHOULD DO.

Try to determine if your neighbors are also without power. Cherokee Electric will charge you a service fee if it turns out the outage is due to a problem only at your place.

Call Cherokee Electric at 800-952-2667. If your phone number is on your account they may recognize your call from your phone number, otherwise you need to HAVE YOUR ACCOUNT NUMBER.

If it is a system outage there will be a recording, or you will get a customer service rep who will ask if your neighbors are also without power and will ask for your account number.

LONG TERM POWER OUTAGE

Barbara Stoll has a set of PREPAREDNESS emails concerning food, water, medical stock-piling, etc. for long-term infrastructure failures.
